La FIFA aplica una multa a la AFA por desvelar los nombres de futbolistas del control antidopaje

Los representantes de la Comisión Médica de la FIFA visitaron el Bronnitsy Training Centre para realizarle un control antidopaje sorpresivo a los integrantes del plantel que conduce el DT Jorge Sampaoli. Pero un "desliz" no deseado provocó que la Argentina reciba la primera sanción económica por parte de FIFA en la previa de la Copa del Mundo, según informa el portal Infobae.com.

Seis futbolistas fueron sorteados y debieron pasar pasar por el procedimiento: Lionel Messi, Nicolás Otamendi, Franco Armani, Eduardo Salvio, Paolo Dybala y Marcos Acuña habían sido los elegidos. Los agentes oficiales se llevaron las muestras y allí finalizó la visita, dado que se trata de un operativo de rutina llevado a cabo en las concentraciones de las selecciones participantes del Mundial.

Pero el procedimiento tiene un protocolo estricto elaborado por la FIFA, según el cual no se deben dar a conocer la identidad de los futbolistas a los que se les toman las muestras. Sin embargo, ayer por la tarde la identidad de los seis nombres sorteados se hizo pública.

A causa de lo ocurrido, la FIFA le aplicó una sanción económica a la Asociación del Fútbol Argentino (AFA), dando por cierto y probado que la "filtración" partió del seno de la propia Selección, aunque el monto de la multa no fue informado por la entidad mayor del fútbol mundial.

Rusia debe plegarse a las exigencias de la AMA (Organizaciones antidopaje)

Rusia debe aceptar de forma íntegra la hoja de ruta de la Agencia Mundial Antidopaje (AMA) antes de poder ser readmitida, anunciaron este miércoles las organizaciones mundiales antidopaje (Onad).

"La víspera del Mundial de Rusia, un país no conforme con el código de la AMA, reiteramos nuestra posición inflexible para que la aplicación de la hoja de ruta de la AMA en su integridad sea una condición para la reintegración de Rusia", explicó la Onad en un comunicado.

En mayo, la AMA estimó que la agencia nacional antidopaje de Rusia (Rusada) había realizado numerosos progresos, aunque dos condiciones quedaban por cumplirse: por un lado, el acceso de los investigadores de la AMA al laboratorio antidopaje de Moscú, y por otro un reconocimiento claro por las autoridades rusas del informe McLaren, que estableció en 2016 la existencia de un sistema de dopaje institucionalizado entre 2011 y 2015.

Esta advertencia se produce la víspera de una reunión del comité de revisión de la AMA, en la que se examinarán nuevos elementos del dossier ruso, entre ellos una carta que data de mayo en la que los responsables rusos reconocen el fracaso de su sistema, pero rechazan la dimensión institucional del mismo.

Hasta el presente, Rusia rechazó a los investigadores de la AMA en el laboratorio de Moscú, antaño bajo la dirección del delator Grigori Rodchenkov, bajo el pretexto de que está realizando su propia investigación.

A finales de mayo Rusia admitió "manipulaciones inaceptables" de su "sistema antidopaje" y la existencia de un sistema de "dopaje sistémico" en el país.

Los zaragozanos Judith Pascual y Gabriel Cristóbal representarán a España en el europeo de culturismo natural

La cita, en la que competirán con la selección española, se celebrará el próximo día 23 de junio en Barcelona.

El WNBB se celebrarÁ el día 23 de junio en Barcelona.PxHere

Los deportistas zaragozanos Judith Pascual, en categoría Fitness Model y Gabriel Cristóbal en culturismo categoría sub 25, **representaran a España en el europeo de culturismo natural WNBB** que se celebrara el día 23 de junio en Barcelona.

Meses de esfuerzo y sacrificio se ven recompensados con esta convocatoria en su primer año de competición, dando así cuenta del buen trabajo realizado por su entrenador Guillermo Fernández del club Body Building Team Zaragoza.

La Asociación Española de Culturismo Natural (AECN), recuerda que los deportistas pueden ser sometidos a los controles antidopaje de la AEPSAD, que es la única agencia que hace controles oficiales y reconocidos en España.

Así, la preparación de estos atletas está **libre de medicamentos, esteroides u otras sustancias prohibidas** para mejorar su apariencia o rendimiento, dándole aún mas valor, si cabe, a su trabajo ya que además de conseguir sus propios logros luchan por un deporte limpio y respetuoso.

Britain to work with Kenya on anti-doping

London, United Kingdom | AFP | Britain's anti-doping agency (UKAD) is to help train its counterpart in east African track powerhouse Kenya for a year, it announced Tuesday.

A five-strong team is in Nairobi to start training Anti-Doping Agency of Kenya (ADAK) staff, mirroring the work UKAD has already completed in Belarus and continues to do in Russia, where the anti-doping agency there has been suspended since late 2015 over a state-sponsored doping conspiracy.

The UKAD contract with Kenya comes with the spotlight firmly on the country, with dozens of Kenyan athletes caught cheating in recent years, although very few of them by their national agency.

Having narrowly avoided being barred from the last Olympics, Kenyan athletics was rocked last month when former Olympic and world 1500 metres champion Asbel Kiprop tested positive for the blood-booster EPO.

"This isn't about being a do-gooder – there's a clear benefit for our athletes from this work in that we are helping to level the playing field," UKAD chief executive Nicole Sapstead told Britain's Press Association.

"There are other anti-doping agencies that could do this work but if nobody else is doing it we will fill the breach – we'll go wherever we have the capacity to go and there is a will for us to help."

ADAK chief Japhter Rugut said: "The agency will benefit a great deal from the partnership with UKAD, which will be actualised through the training targeting our doping control officers and members of the therapeutic use exemption committee.

“This training will go a long way in enhancing the capacity of our personnel as they continue discharging their duties in line with our strategic mandate and the requirements of the World Anti-Doping Code.”

Double boost for Tokyo 2020 as Japan enacts laws on anti-doping and public holidays

- By Daniel Etchells

Tokyo 2020 has today received a boost with Japan enacting a law that will see the promotion of anti-doping activity across all sports.

This legislation, enacted at a plenary session of the House of Councilors of Japan, establishes a legal framework for anti-doping measures - something which Tokyo 2020 President Yoshirō Mori says has been "called for globally, and will boost anti-doping activities in Japan".

It will also make it possible for the Japan Anti-Doping Agency, the Japan Sport Council and public authorities to share information and implement anti-doping measures more effectively.

"With the help of related parties, we will continue our best effort to prepare for a Tokyo 2020 Games where athletes can compete on a level playing field," Mori said.

The passing of the law comes less than a month after two-time backstroke swimming world champion Junya Koga was removed from the Japanese squad for the Asian Games after failing a drugs test.

The failure marked another blemish on Japan's previously good anti-doping record in the build-up to Tokyo 2020.

Tokyo bid officials claimed in 2013 that no Japanese athlete had been implicated in a doping scandal in the latter stages of a contest against Istanbul and Madrid - bids from two countries who had each faced a multitude of failures.

But Japanese kayaker Yasuhiro Suzuki was banned for eight years in January after he admitted spiking a rival's drink with an outlawed substance.

Suzuki laced Seiji Komatsu's bottle of water with an anabolic steroid to ensure he failed a drugs test at the Canoe Sprint Japan Championships last year.

Japanese short-track speed skater Kei Saito then became the first athlete embroiled in a doping scandal during the Winter Olympic Games in Pyeongchang in February.

Saito failed an out-of-competition test for banned masking agent acetazolamide on February 4 and was withdrawn from the Games without competing.

A law has also been enacted to move some national holidays to days linked to Tokyo 2020 Olympic Ceremonies in an attempt to ease traffic congestion in the Metropolitan area ©Getty Images

In another boost for Tokyo 2020 today, the Japanese Parliament has enacted a law to move some national holidays to days linked to Tokyo 2020 Olympic Ceremonies in an attempt to ease traffic congestion in the Metropolitan area.

Kyodo News reports that under the revised law, July 23, the eve of the Games, July 24, the day of the Opening Ceremony and August 10, the day after the Closing Ceremony, will be made holidays for 2020.

A number of important guests, including foreign dignitaries, are expected to travel to and from Japan on those dates.

"The resulting inclusion of special measures in the Japanese Radio Law and in current national legislation governing public holidays takes into account the likely impact of the Opening

Ceremony on people's schedules, and is a significant step towards the smooth implementation of the Tokyo 2020 Games," Mori said.

"We would accordingly like to express our gratitude to everyone who has worked on this legislation.

"We will continue to work with all related parties with the aim of hosting a smooth and safe Games."

A recent study warned that Tokyo hosting the 2020 Olympic and Paralympic Games could cause "fatal congestion" on the Japanese capital's famed subway system.

The study, conducted by Professor Azuma Taguchi of Tokyo's Chuo University, also claimed some of the key lines on the network could be "paralysed" during the event because of overcrowding.

Stations near to Games venues will be the most affected, according to Taguchi, who predicted a 10 to 20 per cent increase in the number of passengers at major transfer points.

Concerns over congestion on the subway network in Tokyo have been exacerbated by the high volume of commuters who use it already on a daily basis, with carriages heaving full of passengers a regular occurrence.

The study, which used mathematical model to predict the flow of passengers on a hypothetical day during the Olympic Games, said 1.3 million fans could add to the eight million commuters on the network, raising additional challenges for the system.
